0% 被检测为由 AI 生成

该百分比表示可能是由 AI 生成的文本以及可能是由 AI 生成且经过 AI 改写的文本的总量。

注意 需进行审核。

在对学生作业做出评判之前 了解 AI 检测的局限性至关重要。我们鼓励您在使用该工具之前 先详细了解 Turnitin 的 AI 检测功能。

检测分组

0 纯 AI 生成文本 0%

可能来自大型语言模型的 AI 生成文本。

0 经 AI 改写的 AI 生成文本 0%

可能是使用 AI 改写工具或词语微调器修订过的 AI 生成文本。

免责声明

我们的 AI 写作评估旨在帮助教育工作者识别可能由生成式 AI 工具准备的文本。我们的 AI 写作评估可能并不总是准确的（即我们的 AI 模型可能会产生误报），因此它不应被用作对学生采取惩罚措施的唯一依据。需要进一步审查和人工判断 并结合组织的具体学术政策应用 来确定是否存在学术不端行为。

常见问题解答

我该如何解读 Turnitin 的 AI 写作百分比和误报情况

AI 写作报告中所显示的百分比 是指提交内容的符合条件的文本中 经 Turnitin 的 AI 写作检测模型判定 可能是由大型语言模型生成的文本 或可能是使用 AI 改写工具或词语微调器修改过的 AI 生成文本的比例。

在 AI 模型中 可能会出现误报（即将人类撰写的文本错误地标记为 AI 生成的文本）的情况。

AI 检测分数低于 20% 时（不会在新报告中显示这些分数） 出现误报的可能性更高。为降低错误解读的可能性 报告中不会标注分数或高亮显示相关文本 而是用星号表示 (*%)。

AI 写作百分比不应作为判定是否存在不当行为的唯一依据。审阅者/教师应将该百分比作为与学生展开建设性对话的契机 和/或根据学校政策 用它来审查提交的作业。

“符合条件的文本”是什么意思

我们的模型仅处理长篇写作形式的符合条件的文本。长篇写作是指构成一篇较长书面作品（如论文、学位论文或文章等）的段落中所包含的单个句子。在提交的内容中 被判定为可能是 AI 生成的符合条件的文本将以青色高亮显示 可能是 AI 生成后又被 AI 改写的文本将以紫色高亮显示。

不符合条件的文本 如项目符号列表、注释性参考文献目录等 将不会被处理 这可能会导致提交内容中的高亮显示部分与所显示的百分比之间存在差异。

Personal Statement

Applicant: Wu Youhe

In fact, my curiosity is the catalyst that drove me to explore the field of artificial intelligence (AI) and computer science at the next undergraduate level. Since I was a child, I have been fond of watching science fiction films, in which those cool, flexible and powerful robots are very attractive to me. In my eyes at that time, unlike ordinary toys that require manual control, these robots seemed to be able to “understand” instructions and “see” the world. With the support and encouragement of my parents, I joined a robotics club and began studying putting together components, adjusting programs, and even writing code. During this period, I came to understand the intricate relationship between logic and motion through repeated testing and refining. Still vivid in my memory is the occasion that I successfully programmed a robot to smoothly complete a square path along a black line for the first time, which brought me a great sense of achievement and joy far beyond completing the task itself. I suddenly understood that it was not magic, but the lines of instructions I wrote down that made the machine become “intelligent”. Since then, my interest in this field has no longer remained on the surface of “robots are cool”, but I am eager to understand the architecture, learning and decision-making mechanisms behind intelligent systems.

My enthusiasm for this field emerged from hands-on practice and was firmly established in logical implementation, which drives me to continuously solidify my high school foundation for my future professional study field. Throughout my studies of the HKDSE curriculum, I am particularly good at mathematics, physics and chemistry as well and I expect to achieve a grade of 4 or above in these subjects. Based on these subjects of the science stream, I gradually have a deep understanding of logic and systems. For example, mathematics taught me to view issues through logic and structure. Besides, I learned to transform the issues of the real world into a computable model through physics while strengthening my ability to find patterns from phenomena through chemistry. It was these subjects that made me deeply experience that theoretical knowledge is never merely about formulas and theorems, but a key to help me understand reality and create change.

As my growing understanding of my chosen field, I gained a deep understanding of its creative process from nothing to something, from rules to intelligence and its infinite possibilities, which made me become increasingly interested in it. Nowadays, whether it is medical diagnosis or urban improvement, AI and computer science are shaping our world we live in. I aspire to explore this field, not only its core technology, but also to get involved and create those intelligent systems that can truly solve problems.

If admitted, I plan to proactively seize some opportunities to participate in practical projects guided by professors and senior students. After accumulating some practical experience, I will strive for independent projects and apply what I have learned. After my graduation, I hope to become an engineer in my chosen field to participate in the process of creating solutions from scratch, just like when I was a child, I used code and components to bring robots to life. But this time, I aim to solve more complex and more real-world problems. I am eager to make some contributions to the directions such as smart city or medical technology, where I believe that I can directly witness how technology to make our life better and efficient in these occasions. I sincerely hope that my application will be favorably reviewed. Thank you for your time and consideration.
