100% 被检测为由 AI 生成

该百分比表示可能是由 AI 生成的文本以及可能是由 AI 生成且经过 AI 改写的文本的总量。

注意 需进行审核。

在对学生作业做出评判之前 了解 AI 检测的局限性至关重要。我们鼓励您在使用该工具之前 先详细了解 Turnitin 的 AI 检测功能。

检测分组

 **1 纯 AI 生成文本 100%**
可能来自大型语言模型的 AI 生成文本。

 **0 经 AI 改写的 AI 生成文本 0%**
可能是使用 AI 改写工具或词语微调器修订过的 AI 生成文本。

免责声明

我们的 AI 写作评估旨在帮助教育工作者识别可能由生成式 AI 工具准备的文本。我们的 AI 写作评估可能并不总是准确的（即我们的 AI 模型可能会产生误报），因此它不应被用作对学生采取惩罚措施的唯一依据。需要进一步审查和人工判断 并结合组织的具体学术政策应用 来确定是否存在学术不端行为。

常见问题解答

我该如何解读 Turnitin 的 AI 写作百分比和误报情况

AI 写作报告中所显示的百分比 是指提交内容的符合条件的文本中 经 Turnitin 的 AI 写作检测模型判定 可能是由大型语言模型生成的文本 或可能是使用 AI 改写工具或词语微调器修改过的 AI 生成文本的比例。

在 AI 模型中 可能会出现误报（即将人类撰写的文本错误地标记为 AI 生成的文本）的情况。

AI 检测分数低于 20% 时（不会在新报告中显示这些分数） 出现误报的可能性更高。为降低错误解读的可能性 报告中不会标注分数或高亮显示相关文本 而是用星号表示 (*%)。

AI 写作百分比不应作为判定是否存在不当行为的唯一依据。审阅者/教师应将该百分比作为与学生展开建设性对话的契机 和/或根据学校政策 用它来审查提交的作业。

“符合条件的文本”是什么意思

我们的模型仅处理长篇写作形式的符合条件的文本。长篇写作是指构成一篇较长书面作品（如论文、学位论文或文章等）的段落中所包含的单个句子。在提交的内容中 被判定为可能是 AI 生成的符合条件的文本将以青色高亮显示 可能是 AI 生成后又被 AI 改写的文本将以紫色高亮显示。

不符合条件的文本 如项目符号列表、注释性参考文献目录等 将不会被处理 这可能会导致提交内容中的高亮显示部分与所显示的百分比之间存在差异。

During the years when I was a boarding student in junior high school, I often stared at the ceiling after lights were turned off, repeatedly recalling a sentence or a look from my classmates, worrying about whether I had said something wrong. That sensitivity towards others' evaluations kept me in a constant state of internal conflict for a long time. It wasn't until I read *The Courage to Be Disliked* that I realized that emotions don't necessarily have to be suppressed or avoided; instead, they can be understood and chosen. I began to try to record my daily emotional fluctuations, analyze the triggers and coping methods, and gradually discovered that "sensitivity" is not just a burden, it enables me to more easily perceive the subtle changes in others' tones and expressions. In group collaborations, I can catch the hesitation of silent members and actively invite them to express their opinions, easing the tense atmosphere. These real and specific experiences have led me to shift from focusing on "how not to be disliked" to thinking about "why we think and feel this way", and thus strengthened my determination to delve deeper into the study of psychology.

After entering high school and university, I began to consciously lay the foundation for understanding psychological phenomena. At Macau University of Science and Technology, the *Mathematics and Logic* enabled me to systematically come into contact with logical reasoning and basic mathematical analysis methods, and I achieved an A+ grade. The rigorous logical training made me pay more attention to causal relationships and argument structures when thinking about emotional and behavioral issues, rather than remaining at the level of subjective feelings. At the same time, in the *Introduction to Chinese and Western Cultures*, I gradually understood the differences in individual values and self-identity in different cultural contexts. This allowed me to think about my classmates' emotional troubles by combining family and social backgrounds. Additionally, in the English courses and photography courses, I continuously trained my expression and observation skills: the former improved my ability to read and understand English literature, while the latter strengthened my ability to capture details and grasp the overall context.

During my study at Zhongshan Huachen Experimental Secondary School, I completed a small questionnaire survey on Emotional Regulation Methods of High School Students in a classroom project. I designed questions based on common sources of stress and their corresponding regulation methods, distributed and collected questionnaires from about 40 classmates, and after organizing the data, I found that listening to music, being alone, and talking to friends were the three most frequently mentioned methods. I then created a visual summary of the results and shared it in the class, triggering discussions among classmates about mental health. This experience allowed me to initially come into contact with the basic processes of questionnaire design, data organization, and result presentation. I also realized that although many students have emotional problems, they lack systematic channels for expression and understanding. At the same time, I participated in interviews and content design in the school media club and radio program planning, learning to listen to others' stories and extracting core information. In my view, these club experiences enhanced my communication skills and empathy, and enable me to better assume the roles of listening and coordination in groups.

One day, during an English presentation in the university photography course, we were required to create an art piece within a short period of time and explain its social significance. During the preparation process, one team member fell ill and failed to complete the originally assigned

task. The team then experienced anxiety and blame. I noticed that some members were silent but clearly in a low mood. So, I took the initiative to redistribute the tasks, comforted everyone, and communicated with the sick student about their actual situation. Eventually, we completed the presentation on time. This experience made me realize that emotional management and communication methods in team collaboration can directly affect efficiency and results. Psychology is not just present in the classroom and textbooks, but in real interactions. Sensitivity to emotional cues and awareness of atmosphere changes enable me to remain relatively calm in stressful situations and try to solve problems rationally. These practical experiences will help me better understand group dynamics and interpersonal interactions in my future psychology studies.

In the future, I hope to build on my systematic study of psychological theories and research methods, and focus on the emotional development and psychological adaptation issues of the youth group. Having experienced boarding life and academic pressure, I fully understand the vulnerability and complexity of this stage. I look forward to working in school psychological counseling or related institutions in the future, assisting students in establishing healthier emotional cognition and expression methods. I believe that psychology is not only a discipline that studies behavior and mind, but also a tool that helps individuals better understand themselves and others. With a concern for real problems and a reverence for methodology, I hope to continuously deepen my professional capabilities in my future studies and transform my personal experiences into more professional support and practice.
